

Cloud Resource Graph $G = (V, E, \Phi_V, \Phi_E)$

Node $v \in V$
 Φ_V : provider, tier, HA, $\sigma(v)$

Edge $e \in E$
 Φ_E : kind, proto, $s(e)$

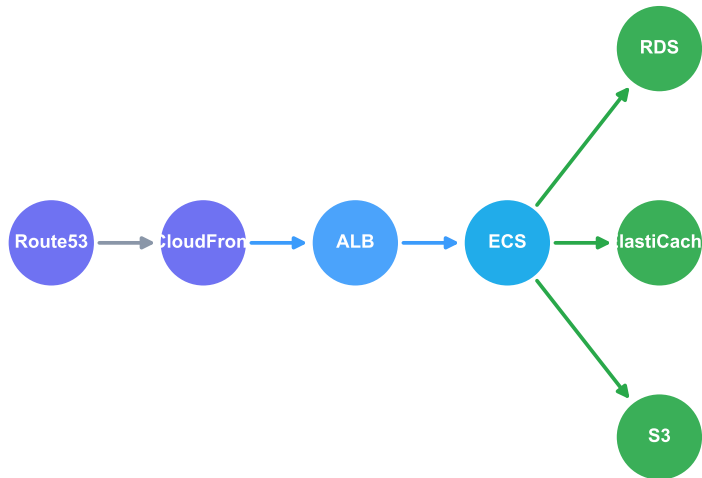

$\sigma(v) = \{\text{auth, encT, encR, pub, mtlS, waf, priv}\}$

Trust $\tau(v)$
untrusted / dmz / trusted

Attack surface $A(G)$
public exposure + reachability

Zero-Trust score $S_{ZT}(G) = \sum w_i c_i(G)$

Three-tier template (planner.py)
